

Description

CleanPro® bouffant hoods, sometimes referred to as ninja hoods, are chemically unreactive and biologically inert. Manufactured from low-linting, non-woven 100% spun bound polypropylene with filament, they are latex-free and designed to be easily pulled over your head and feature a covered, unexposed natural elastic edge for a tight fit.

CleanPro® bouffant hoods are individually inspected for stitching, sizing, material, and workmanship to ensure high-quality coverage of hair and beard areas. Hoods provide reliable protection in laboratory, pharmaceutical, food, industrial, and cleanroom applications.

CleanPro® bouffant hoods have been found to fully capture hair from women with longer hair and men with facial hair, while fully eliminating the need for beard covers. They can be worn above the mouth and nose to act as a partial face shield, while still allowing one to breathe.

Product Features

- Low linting, non-woven 100% spun bound polypropylene with filament
- Covered, unexposed natural elastic edge
- 3 mm. latex-free elastics
- Color: White with white stitching (other colors available)

Technical Data

- Base Weight: 16 g/m²
- Stretch Limit: 120%
- Elastic: 18-20cm (at rest)
- Weight: 5.5 ±0.2g per hood
- CD: 23-120rpm 1 min. <1,100 (above 0.5 microns)
- Airborne Particle Counts available upon request
